PROFILE

Software developer focused on web development. Intuitively applying code to problems and working on diverse projects in teams. Passionate about personal growth and applying strategy to obtain the best possible results.

EMPLOYMENT HISTORY

Second Line Support, MyAffiliates
Skyparks, Luqa, Malta

Nov 2023 — Present

I recently started working at MyAffiliates as a second line support for their clients. Here, I get to apply knowledge from both my experience with support as well as a fair amount of what I learned in my software development education.

From day-to-day, my main tasks have been working with tickets and incidents involving clients and their affiliate websites. This includes everything from getting functions on their website to work, to setting up entirely new websites for clients.

Every day is different- This job has required a good working knowledge of PHP, SQL, and basic Linux skills, as well as the ability to be flexible, informed and able to problem-solve.

.Net Developer, Mindbite
Linköping, Sweden

Jan 2023 — Jun 2023

I worked for Mindbite for 6 months, as part of my education.

My team was responsible for producing high-end web applications for several big companies. I was mainly involved in two projects:

- The first project revolved around setting up API calls and displaying the information obtained in a web interface (front and backend). As per requirements, I implemented authorisation and authentication processes for client configuration, this allowed users to create a personal account and access information accordingly. For this project I used C# and JavaScript alongside Azure and Microsoft identity platform.

LANGUAGES

Swedish

English

HOBBIES

My second home has always been nature. I love spending time outdoors - canoeing, climbing, biking and running amongst the trees. Other than that, I am fascinated by technology - the potential for growth and automation always drives me.

- The second project involved setting up a mobile application utilising MAUI. This also involved configuring notifications and deploying to android and IOS.

I also participated in weekly code reviews, offering constructive feedback to improve code quality.

Support Engineer, Combitech
Linköping, Sweden

Jun 2017 — Jun 2020

Worked at Combitech as a consultant to Saab, where I worked as second and third line support.

- Resolved incidents and requests related to applications, accounts, software and hardware.
- Held the role of Quality Coordinator for the case management system that my team was using for incidents and requests.
- Was responsible for hardware, software and network setup, maintenance, diagnosis and repair.
- Engaged in documentation and system mapping tasks.
- Developed strong communication skills, improved problem-solving abilities, and acquired effective time and stress management skills.
- Tracked and monitored data restoration and backup

EDUCATION

.Net developer, Jönköping University
Jönköping, Sweden

Jun 2021 — Jun 2023

Having completed my education as a .NET Web Developer, I am now a qualified web developer with expertise in web applications and system development.

Through this education I learned how to design and create user-friendly web applications and secure, scalable web-services from initial ideation up to a finished developed product.

College (Technology specialisation), Realgymnasiet
Linköping, Sweden

Aug 2014 — Aug 2018

I completed the Technology Program with a specialization in programming. I also chose to extend my education into a fourth year to become a high school engineer.

- Acquired a strong foundation in programming languages, including C#, PHP, HTML, CSS, and Javascript during high school.
- Gained knowledge in database management.
- Gained proficiency in operating systems like Windows 7 and 10, as well as networking and security.
- In the fourth year, developed a deep understanding of business operations and expertise in structuring and planning large projects.
